Librex Newsletter - December 2016

Hi Marc-Andre,

Here's the December edition of our Librex Newsletter, which has the goal of keeping you informed about various Librex best practices and presenting you some of our new features.

Reference Model Delivered With Librex

To avoid writer's block when it's time to configure Librex, we now deliver the application with an example of a document model to manage invoices. It's a simple template that you may use for training purposes and that can become an inspiration when it's time to create your own document model.

This example includes a wide range of the types of operations that can be automated by Librex like optical character recognition or barcode extraction.

If you prefer, you may also create your new document model based on this example ("New From..." function) and then simply adjust your properties and extraction automatism on your new model.

Automate With Scheduled Tasks

Librex enables you to define scheduled tasks that will run with the recurrence of your choice.

In those scheduled tasks, you can execute a script with code that is tailored to your operational requirements.

You could, for example, send by email a report giving the quantity of documents that were scanned or consulted by a specific user or group. Or you might send yourself a notification about the state of your capture counters. Or get a list of documents that were modified by a user task. Or even fetch data in an external system and modify documents' values in Librex based on the results of this interrogation.

Think about the manual operations you must repetitively do on your documents and contact us to see how scheduled tasks could help you automate them.

Thank you for reading our Librex newsletter. We appreciate your interest in our solution and invite you to contact us for any question.

We also invite you to follow us on [Twitter](#) or like us on [Facebook](#) to get all the latest news on Corium and Librex.
