Librex Newsletter - January 2015

Hi Marc-Andre,

Here's the January edition of our Librex Newsletter, which has the goal of keeping you informed about various Librex best practices and presenting you some of our new features.

Extraction/Conversion/Validation Chain

Librex enables you to capture any type of content and any unstructured data. Then, to transform this data into usable information, Librex offers you multiple tools:

- Extraction automatisms: Librex can extract data from a document using its barcode reader, reading the date or name of a file, recognizing an image, calculating the percentage of black in an image or zone, using optical character recognition (OCR) or by executing an advanced data lookup script.

- Conversion functions: They enable you to modify the result of an automatism, for example by removing, adding or replacing characters, by removing accents, by converting to upper or lower case, by separating the data per line, by adjusting values based on a predefined list or by converting a date format.

- Validation functions: They analyze the result of the extraction and conversion to validate against a criteria, for example to recognize a document type by searching for a word or substring of characters, by comparing the value to a minimum and maximum, by validating against a regular expression or by enforcing specific characters at specific positions.

Big Data? Use Librex!

With the strong growth of data that we have to manage, we often talk about Big Data, which we can also extend to the concept of Big Document.

A Librex server (or cluster of servers) becomes your best ally to analyze and process all this data.

With tools like the extraction automatisms and the conversion and validation functions mentionned above, with its different capture options (paper, email, fax, prints, electronic documents...), with its various smart connectors and with its workflow tools, Librex enables you to identify and manage only the information that's relevant for you.

You'll be able to target the important data and documents, and to get them in the format that's most convenient for you.

For example, if you generate a large quantity of reports, you could send them to Librex which will identify the relevant data for your decision making and will then present this data in a consolidated way to the concerned people.

Thank you for reading our Librex newsletter. We appreciate your interest in our solution and invite you to contact us for any question.

We also invite you to follow us on Twitter or like us on Facebook to get all the latest news on Corium and Librex.

To consult the complete Librex documentation, visit our Librex Documentation Portal

If you would like to read the past editions of our Librex newsletter, we invite you to visit the following page: Librex Newsletter

Finally, if you think some of your contacts would be interested to subscribe to our Librex newsletter, feel free to invite them to subscribe here: Subscribe to Librex Newsletter
